No Risk Free 5 Day Trial!

Frequently Asked Questions

What is a 5-day Trial Period?

eTransMed's offers a 5-day free trial. There are no strings attached. During this trial period, we will provide you with full transcription services, which among other services include, your formatting preferences and a summary of your account. We are very confident that at the end of this trial, you'll choose to continue our industry leading services.

How are the dictations submitted?

eTransMed's dictations may be submitted by using our toll-free phone number, fully programmable into your phone system's quick dial button. Just dial in your ID number and start your dictation. You may also choose to use a digital recorder, if you so prefer, and automatically upload the information to us. We encourage you to use your "canned phrases" or "normals" – this will help simplify your dictation process.

How do I retrieve my dictations?

Retrieving your dictations is made very simple by using **eTransMed's** secure, HIPAA-Compliant, state-of-the-art, Internet Explorer-based, software. Just log in on our website, type in your user ID and password and you will be able to view all of your dictations. You then have a choice to edit and approve the dictations. Your dictation will then instantly be ready for printing on your letter-head, along with your digital signature. You may also download the files in any format, e.g. Microsoft Word. We can also fax or mail the dictations to you, if that is your preference. The dictations are available for your on-line retrieval and your transcription is archived in our network-redundant system indefinitely.

Can I choose when I get my transcriptions back?

Our services provide you turn-around-time (TAT) options of 2, 4, 12, 24 or 48 hours. Our standard TAT is 24 hours, seven days a week.

Transcribed Report

Recent status: One to three months out from a right cubital tunnel. Overall, she seems to be doing okay. We still compare of sensation numbness and tingling and some medial elbow pain.

PHYSICAL EXAMINATION:
On exam, the wrist is fairly bony. The range of motion is without crepitus. There is no evidence of stability of the nerve. The four digit skin notes intact motor function and no apparent discoloration 3 mm on each side of each digit.

ASSESSMENT:
Status post right in situ cubital tunnel release.

PLAN:
Patient continues to show some sign of improvement. She is three months out. She has a bit of an ulnar preservative and ulnar preservative course. I do not believe that further intervention will be needed and we will see her for her final check in three months, sooner if necessary.
